

Retaliation depth across the heatmap interiors
Depth = (steady-state Δ) - (minimum Δ during periods 1-30).
Darker = stronger retaliation = stronger evidence of genuine reward-punishment collusion.

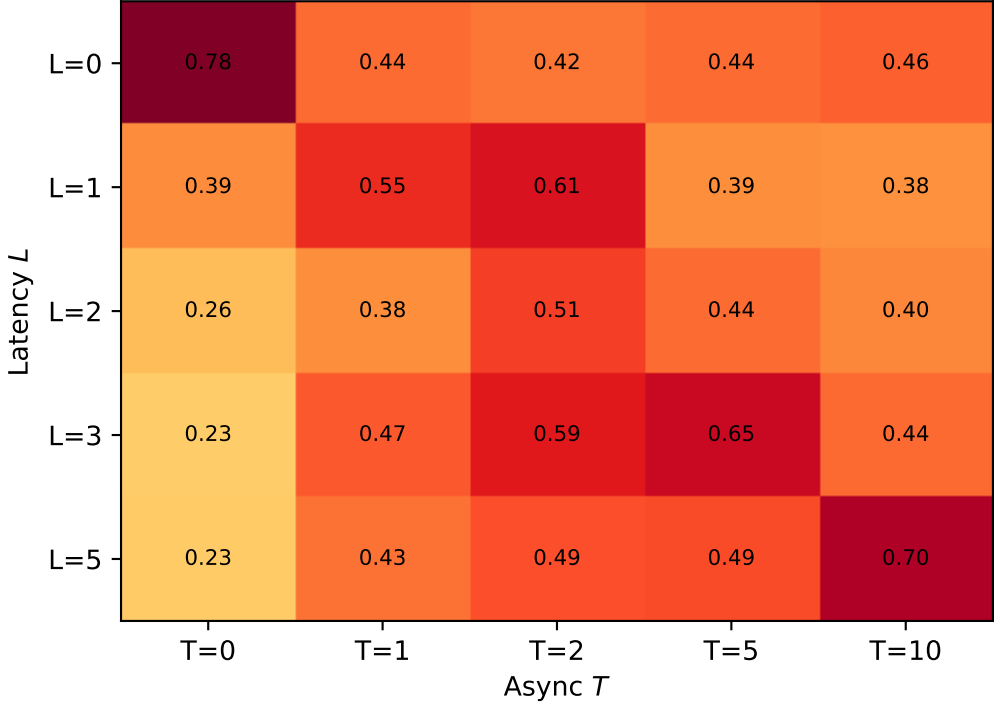

L x σ : retaliation depth (Low deviation)

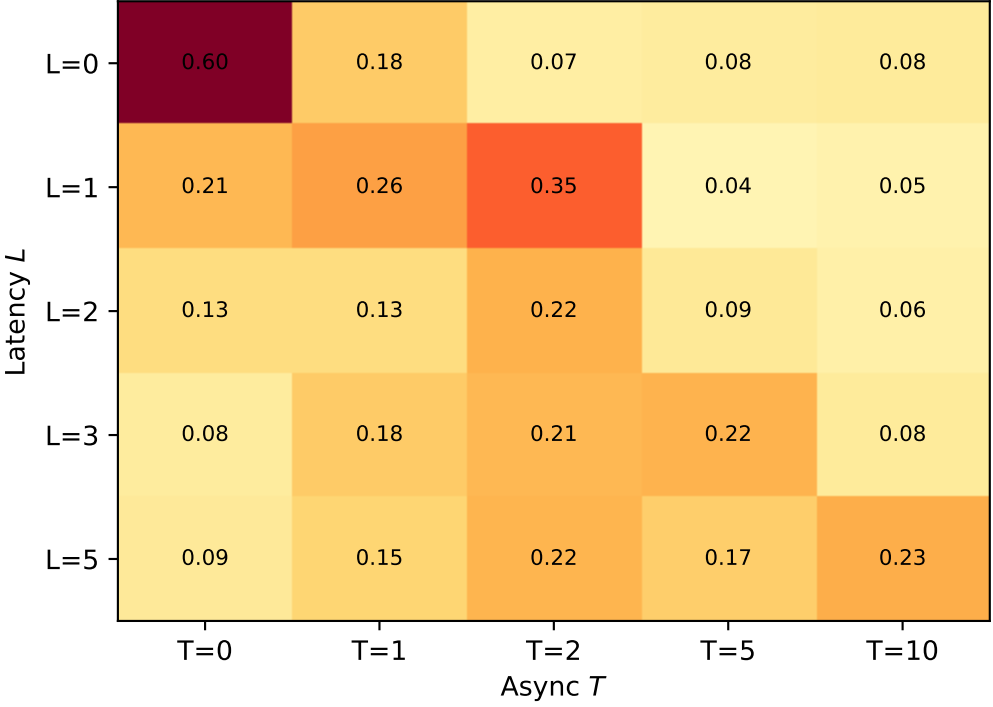

L x σ : retaliation depth (BR deviation)

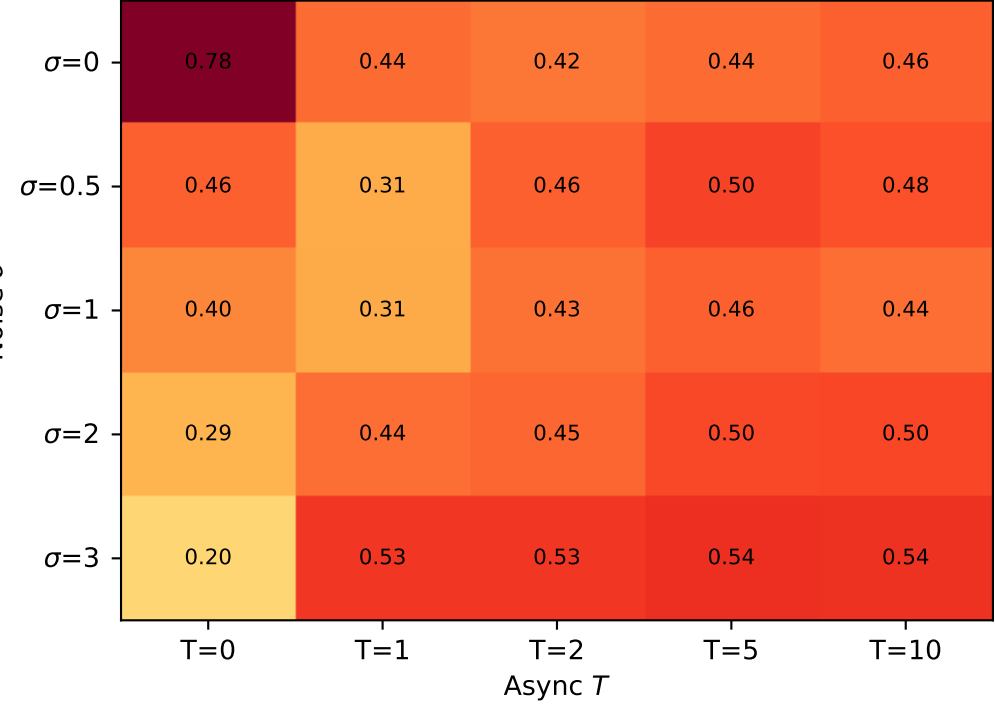

L x T: retaliation depth (Low)

L x T: retaliation depth (BR)

σ x T: retaliation depth (Low)

σ x T: retaliation depth (BR)
